

# PLATFORMS FOR CARE COORDINATION

To improve information sharing and collaboration between organizations

Factors outside of the health care system (social determinants of health – food, jobs, childcare, housing, etc.) account for over sixty percent of health. Ensuring access to and utilization of these services is a vital part of moving the needle in healthcare outcomes. These seven platforms may streamline the way referrals occur or function as a “go-to-list” for a variety of services. We encourage you to consider them.

## Healthify

A platform that connects healthcare organizations with community services to address social determinants of health with care coordination.

### Three major components:

- *Healthify Search* to find community organizations, social services, and government benefits.
- *Healthify Track* to allow care teams to identify social/behavioral healthcare needs with an integrated assessment tool and track all referral activity.
- *Healthify Coordinate* to allow organizations to “close-the-loop”.

For more information, visit [healthify.us](http://healthify.us)

## Welnyt

A free platform to connect clinicians and community service providers to each other across expertise, organizations and locations to improve referral quality and community health.

### Two major components:

- *Live query board* to post questions and receive feedback from a network of providers.
- *Resource database* to search for resources by name, description, service, or location – can be used to create a “go-to-list”.

## Social Solutions

Apricot is a nonprofit software solution for tracking clients and measuring outcome and reporting.

### Core components:

- *Data sharing and management* among participating organizations.
- *Communication and Care Coordination* capabilities between participating agencies.
- *Online resource list* of periodically updated medical, behavioral health and social services.
- *Mobile friendly public interface* for medical, behavioral health and social services resource location and geospatial mapping.

For more information, visit [socialsolutions.com](http://socialsolutions.com)

A platform that provides access to comprehensive, localized listings of community service programs

### Major components include:

- *Free Search and Referral* to find results relevant to seeker's unique needs – available to anyone regardless of geography.
- *Referral Outcomes* to close the loop by tracking outcomes on follow-ups with community partners.
- *Team Collaborate* to encourage staff to share information and rate programs.

## Patient Care Intervention Center

The Unified Care Continuum Platform facilitates data sharing and cross-agency care coordination for the most vulnerable individuals.

### Three major components:

- *Community Data eXchange* merges patient data from medical and social service agencies.
- *Community Resource eXchange* facilitates effective resource referrals between medical and social agencies (links existing resource databases like 211 or Aunt Bertha)
- *Community Care Coordination* provides care coordination through a shared, web-based health record system.

## Pieces Iris

Pieces Iris is a cloud-based case management platform that addresses both the clinical and social determinants of health for social service providers, hospitals, and health plans.

### Key Features:

- *Closed Loop Referrals* to make referrals and track completion to provide follow-up actions and help keep patients on track.
- *Comprehensive and customizable reporting*

For more info, visit [piecestech.com](http://piecestech.com)

## Eccovia Solutions

ClientTrack Case Management provides tools required to manage patient care with a comprehensive care plan that is visible to agencies across the care continuum.

### Major components include:

- *Case Notes* to create customized care plans, identify barriers, and match clients to resources.
- *Mobile Access* to view data, enter new data, or correct data from field locations.
- *Online portal* for cross-departmental collaboration.
